

Assignment-4

Develop a mobile application that takes the user input and sends it to IoT device (python code). print the received data in python shell.
Keep a text box to accept the user input.integrate a submit button.
whenever user enters the text input in text box and clicks the button the data should be sent to IBM cloud using URL(HTTP API).

Code:

```
import ibmiotf.application
import ibmiotf.device
import random
import json
import time

#Provide your IBM Watson Device Credentials
organization = "frtx4v"
deviceType = "iotdevice"
deviceId = "1001"
authMethod = "token"
authToken = "1234567890"

# Initialize the device client.

T=0
H=0
```

```
def myCommandCallback(cmd):  
    print("Command received: % s" % cmd.data['command'])  
  
    if cmd.data['command']=='lighton':  
        print("LIGHT ON IS RECEIVED")  
  
    elif cmd.data['command']=='lightoff':  
        print("LIGHT OFF IS RECEIVED")  
  
    if cmd.command == "setInterval":  
        if 'interval' not in cmd.data:  
            print("Error - command is missing required information: 'interval'")  
        else:  
            interval = cmd.data['interval']  
    elif cmd.command == "print":  
        if 'message' not in cmd.data:  
            print("Error - command is missing required information: 'message'")  
        else:  
            print(cmd.data['message'])
```

try:

```
deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-method":  
authMethod, "auth-token": authToken}
```

```
deviceCli = ibmiotf.device.Client(deviceOptions)
```

```
#.....
```

except Exception as e:

```
print("Caught exception connecting device: %s" % str(e))
```

```
sys.exit()
```

Connect and send a datapoint "hello" with value "world" into the cloud as an event of
type "greeting" 10 times

```
deviceCli.connect()
```

while True:

```
T=23
```

```
H=45
```

```
#Send Temperature & Humidity to IBM Watson
```

```
data = {"d":{"temperature": T, 'humidity': H}}
```

```
#print (data)
```

```
def myOnPublishCallback():
```

```
    print ("Published Temperature = %sC" % T, "Humidity = %s%%" % H, "to IBM  
Watson")
```

```
    success = deviceCli.publishEvent("Data", "json", data, qos=0,  
on_publish=myOnPublishCallback)
```

if not success:

```
print("Not connected to IoT")
```

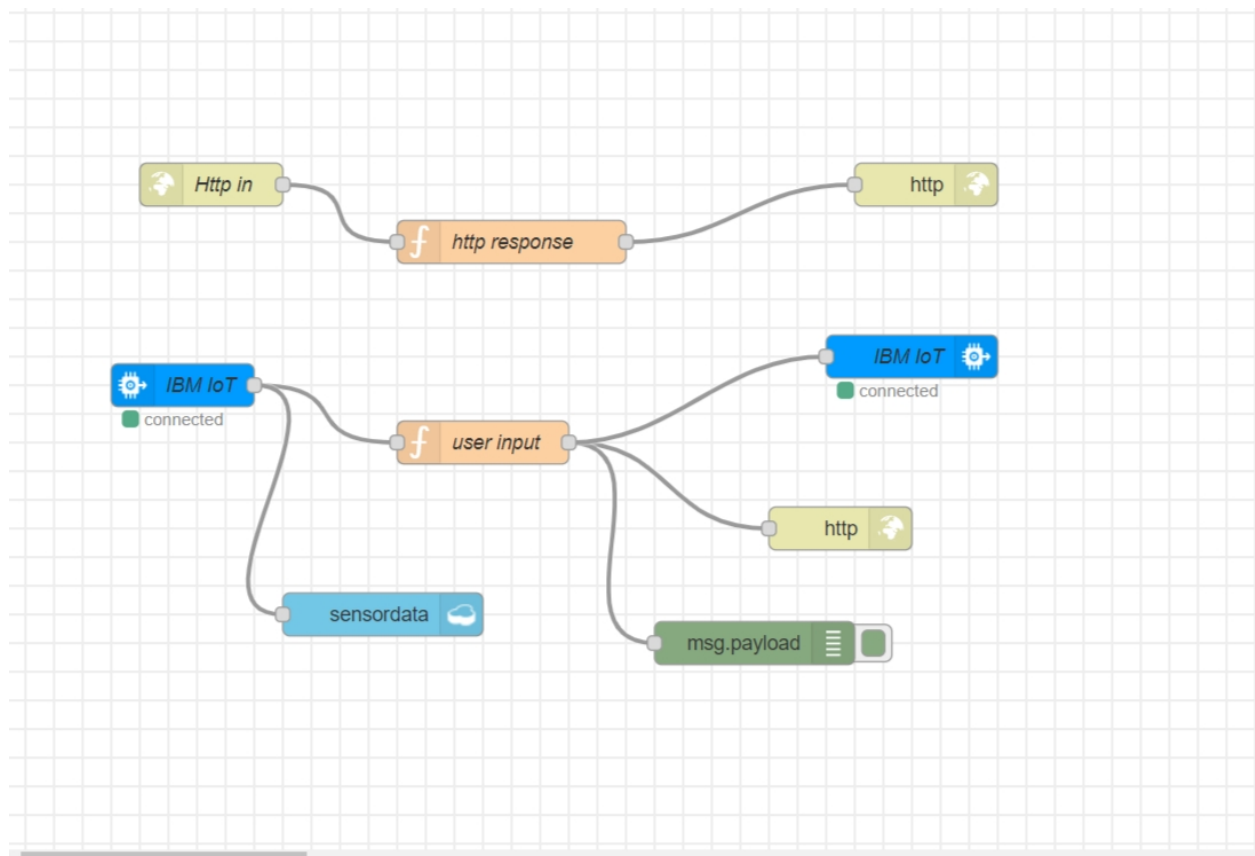

```
time.sleep(1)
```

```
deviceCli.commandCallback = myCommandCallback
```

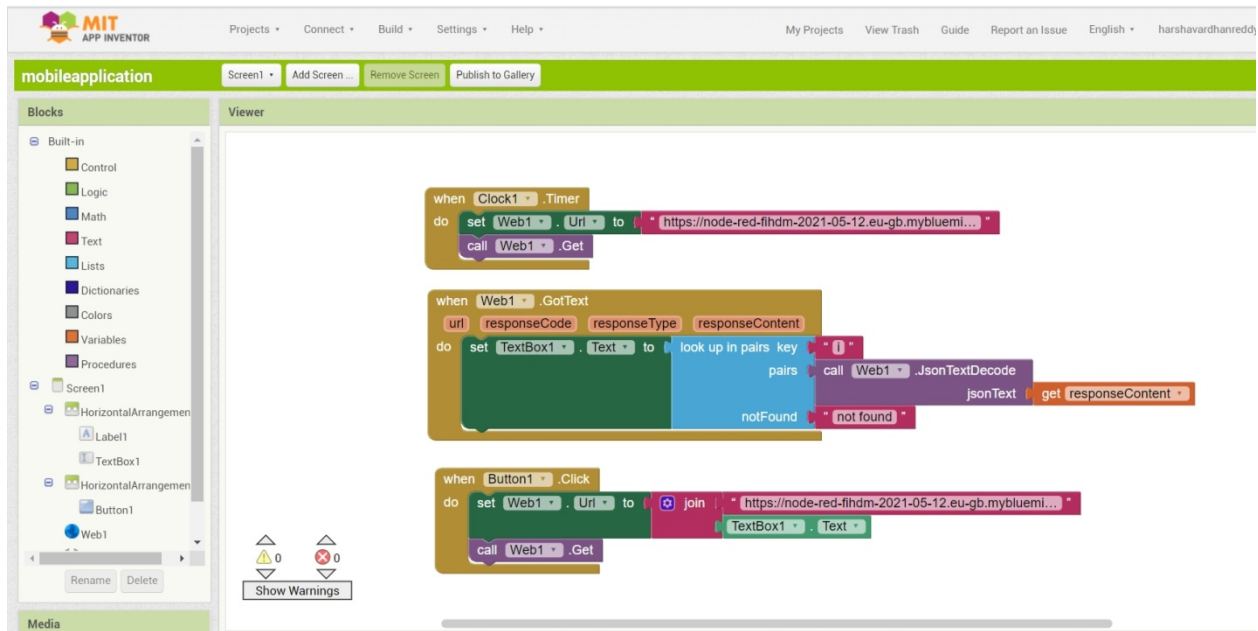

Disconnect the device and application from the cloud

```
deviceCli.disconnect()
```
